

## Opera2cheCK

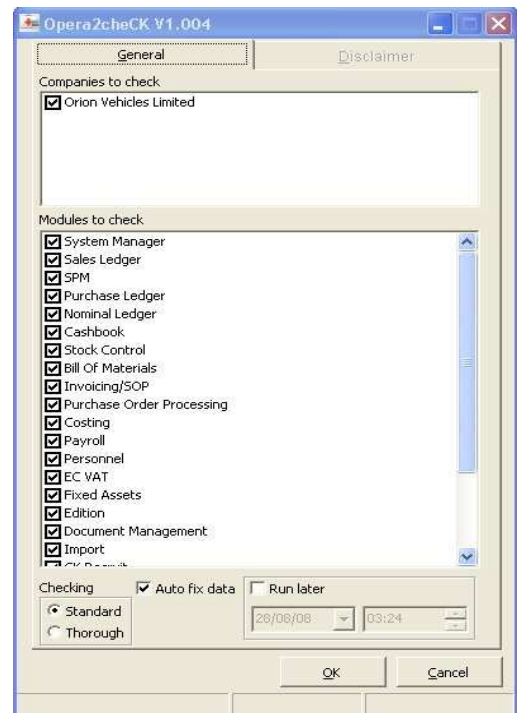

### Product Overview:

Opera2cheCK is a data checking and repairing utility written by CK Systems to give you the peace of mind that your Pegasus Opera data is sound at all times. This utility can be run at any time and will automatically detect and repair many of the data problems sometimes encountered when running Pegasus Opera II. Some of these problems can sit there undetected until the month end routines are run and by then it can be too late to restore to a backup thus incurring a costly data fixing visit by a software engineer.

Opera2cheCK deeply searches all Pegasus Opera II data and system databases (optionally by company and by module) and reports any physical data corruptions to you the user. The auto-fixing feature fixes many common data, memo and index corruption problems that can occur within Pegasus Opera II (i.e. Error 15, Error 41, Error 26) and a full audit trail is produced for your records. There is also a timed verification routine that may be selected for overnight or off-peak data file checking.

### Key Functionality:

- Quick and easy to use— a true 'click and fix' solution with no user knowledge or interaction
- Peace of mind against corrupt Pegasus Opera data – checks and repairs errors in all modules including any bespoke installed on the system. Saves the cost and hassle of arranging a software engineer visit and any system downtime in the meantime
- Runs independently of Opera II so that even if you are unable to log into Opera due to an error then database recovery is still possible
- Can be run for individual modules or for the entire Opera system with both standard and thorough data checking options available
- Timed scheduling option allows Opera2cheCK to check data integrity at a time convenient to the user with minimal downtime
- A full audit trail is generated upon completion showing all errors encountered

Software Cost:           **£495+VAT**  
AMC:                       **£150 +VAT**

**Note:** The Pegasus Opera II Toolkit must be present on the system.
